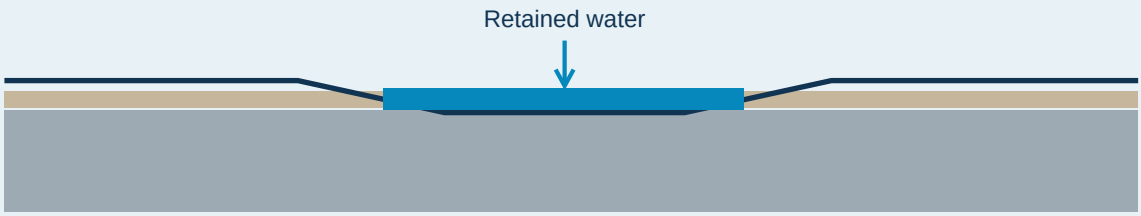
Roof ponding & drainage

TECHNICAL ILLUSTRATED GUIDE / 07

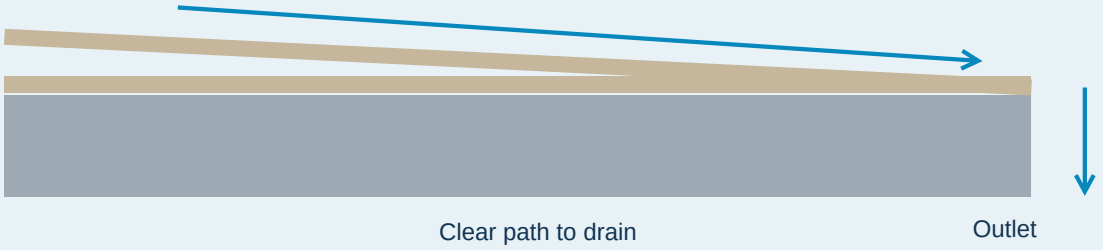
Waterproofing and drainage work together.

01 Find low spots



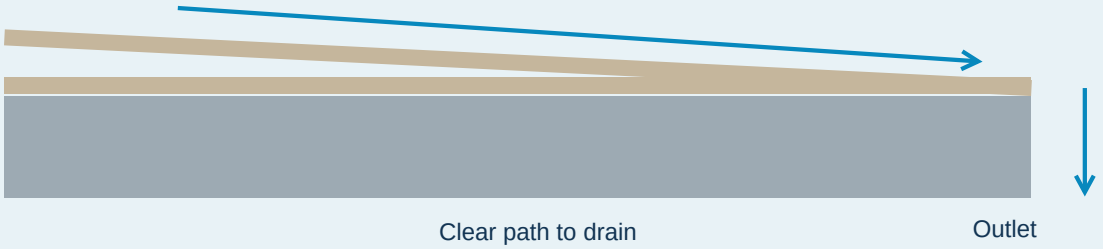
Standing water may indicate poor falls or local depressions. Check the outlet level.

02 Clear the drainage route



Remove debris from accessible channels and outlets. Check that water can discharge freely.

03 Improve falls where appropriate



Use compatible bonded screed or levelling material. Confirm loading, thickness and outlet levels first.

Conceptual illustrations only. Verify actual site conditions and product specifications.
